

PATENT

METHODS AND COMPOSITIONS FOR THE TREATMENT
OF NEURODEGENERATIVE OCULAR PATHOLOGIES

EXONHIT THERAPEUTICS SA

ABSTRACT

The invention relates to the field of biology, genetics and medicine. In particular, the invention relates to novel methods for the detection, characterization and/or treatment (or management) of neurodegenerative pathologies. The invention also relates to methods for the identification or screening of compounds active in the aforementioned pathologies. The invention further relates to the compounds, genes, cells, plasmids or compositions which are used to carry out said methods. In particular, the invention is based on the identification of the role of phosphodiesterase 4B, the peripheral benzodiazepine receptor (PBR) and GABA receptors of the type GABA(A) in neurodegenerative pathologies and describes the use of same as therapeutic, diagnostic or experimental markers or targets for said disorders.
